- Includes user requested features since 1994

Powerful Software!
CrossScanner works with any Mouse, Keyboard, or Joystick and Adapted Switches
Most Assistive Technology Switches interface with one of these standard Input Devices.
OnScreen will work with any type of pointing device in Windows.

On-screen Keyboards with Single Switch Scanning Operation

WordComplete - Adaptive Word Prediction and Completion
The WordComplete / Action Panel actively selects words as the user is typing. The words are sorted by frequency of use, pulled from an editable list based on the letters already typed. Selection results in the automatic completion of the word. New words are automatically added. Suffix selection is available, and an Undo option reverses the last command.

CrossScanner provides single-switch scanning!
Used under license from RJ Cooper, CrossScanner has been developed to provide complete control of the Windows environment from a single switch. With Mouse, Keyboard, and Joystick interfaces, CrossScanner provides numerous options to allow users the same capabilities while operating Windows, Internet Browsers, E-mailing, word processing, and any other application. Seamlessly integrates with OnScreen for Text input.
